## Stainless Steel Custom PLC Vacuum Evaporator For Wastewater System For Low Temp

Our Product Introduction

for more products please visit us on [aipukqdl.com](http://aipukqdl.com)

### Basic Information

- Place of Origin: China
- Brand Name: Aipu
- Certification: CE CCC SABS TUV RoHS
- Price: Negotiable
- Packaging Details: Standard Export Package
- Delivery Time: 6-8 workdays

### Product Specification

- Capacity: Customizable
- Control System: PLC
- Operating Pressure: Low Pressure
- Temp: 35°C
- Material: Stainless Steel
- Distillation Method: Vacuum Distillation
- Installation: Easy To Install
- Power Supply: Electric
- Highlight: **plc vacuum evaporator for wastewater,  
custom wastewater evaporator for sale,  
custom vacuum evaporator for wastewater**

## Product Description

### Product Description:

Our Vacuum Heat Pump Distillation System for Low Temperature is specifically engineered to provide high energy efficiency, making it the perfect choice for those who want to save on energy costs while still achieving excellent results. With a temperature range of 35°C, this system is capable of handling even the most challenging distillation requirements.

The Low Temperature Vacuum Distillation System with Heat Pump is an electric-powered system that is easy to operate and maintain. It is designed with a host of features that make it an essential tool for any laboratory or industrial setting. The system is designed to provide precise control over temperature, ensuring that you get accurate results every time.

Our Vacuum Distillation System with Heat Pump at Low Temperature is perfect for a range of applications, including chemical, pharmaceutical, and industrial processes. The system is capable of purifying a wide range of substances, including solvents, oil, and other liquids. The system is also designed to be versatile, making it ideal for a range of distillation techniques.

One of the key benefits of our Vacuum Heat Pump Distillation System for Low Temperature is its energy efficiency. The system is designed to deliver high efficiency, ensuring that you can save on energy costs while still achieving excellent distillation results. This makes it an ideal choice for those who want to reduce their carbon footprint while still achieving excellent results.

In summary, if you are looking for a powerful and efficient Low Temperature Vacuum Distillation System with Heat Pump, then look no further than our Vacuum Distillation System with Heat Pump at Low Temperature. With its high energy efficiency, precise temperature control, and versatile design, this system is the perfect solution for all your distillation needs.

### Features:

**Product Name:** Heat Pump Low Temperature Vacuum Distillation System

**Power Supply:** Electric

**Capacity:** Customizable

**Heat Pump Type:** Low Temperature Heat Pump

**Safety Features:** Automatic Shutdown, Overheat Protection

**Temperature Range:** Low Temperature

Introducing our Low Temperature Distillation System with Vacuum and Heat Pump. This system is designed with a Low Temperature Heat Pump and is customizable in terms of capacity. It also comes with safety features such as Automatic Shutdown and Overheat Protection. If you're looking for a reliable and efficient Low Temperature Vacuum Distillation System with Heat Pump, this product is perfect for you!

### Technical Parameters:

Control System	PLC
Operating Pressure	Low Pressure
Material	Stainless Steel
Heat Pump Type	Low Temperature Heat Pump
Capacity	Customizable
Model	IVECDEST S-VE
Safety Features	Automatic Shutdown, Overheat Protection
Distillation Method	Vacuum Distillation
Power Supply	Electric
Vacuum Level	High Vacuum

### Applications:

Our low temperature vacuum distillation system with heat pump is widely used in the production of heat-sensitive materials, such as vitamins, essential oils, and natural extracts. The system operates at a low pressure, making it energy efficient and cost-effective. It also features a high vacuum level and a temperature of 35°C, providing accurate and efficient distillation results.

Our product is certified by CE, CCC, SABS, TUV, and RoHS, ensuring that it meets the highest quality and safety standards. The price of our product is negotiable, and we offer a standard export package for packaging details. The delivery time is 6-8 workdays, ensuring that you can receive your product on time.

The low temperature vacuum-based heat pump distillation system is ideal for a range of occasions and scenarios. It is perfect for extracting and refining heat-sensitive substances, such as natural extracts and essential oils. It is also ideal for the production of pharmaceuticals and chemicals, where accuracy and efficiency are essential. Additionally, this system is suitable for food processing applications, where heat-sensitive ingredients must be processed at low temperatures.

In conclusion, Aipu's low temperature vacuum distillation system with heat pump is an excellent investment for any industry that requires accurate and efficient distillation results. Our product is energy-efficient, cost-effective, and certified by leading quality and safety standards organizations. It is perfect for a range of occasions and scenarios, making it a versatile and valuable addition to your production line.

**Customization:**

**Support and Services:**

The Heat Pump Low Temperature Vacuum Distillation System is a high-quality product specifically designed for the distillation and purification of heat-sensitive materials. Our team of experts provides product technical support and services to ensure that our customers get the most out of their investment. Our technical support includes:

**Installation and startup assistance**

**Maintenance and repair services**

**Training and education on system operation and maintenance**

**24/7 technical support hotline for urgent issues**

Our team is dedicated to providing exceptional customer service and support to help our customers achieve their goals and succeed in their industries.
